

## ***HOW TO CARE FOR YOUR DRIVEWAY***

- Don't drive on it for the first 24 hours.
- Avoid turning your steering wheel when the car is stationary and avoid wheel spinning and sharp braking.
- Vehicles over 3 tonnes should not be allowed on the driveway as they are not designed for industrial use.
- As the asphalt is exposed to the elements, the colour changes over time to a "gun-metal" grey.
- Avoid skateboarding, roller blading and other hard wheel based toys.
- Avoid walking on it with high-heeled shoes.
- No sharp ended objects such as trailer jockey wheels.
- Avoid overly heavy objects for extended periods of time, such as heavy potted plants.
- Sweep regularly.
- Avoid solvent, diesel, petrol and oil spills.  
Clean these spills up as soon after as possible.
- Don't mix concrete on the asphalt, as the spills will stain.
- Don't use high pressure hoses to wash down the asphalt during the first 3 months, it will damage the Bitumen layer.
- If you see weeds/grass coming through, use weed poison immediately, such as Round Up.
- Repair damaged kerbing immediately.
- Ensure all drains are unblocked, so that water doesn't sit on the driveway.

*Our 1 year guarantee does not cover underground water movement, water tables and clay soil – resulting in damage to the stone base course layers and asphalt wearing course.*

*The reason for this is that these items are extremely difficult to detect as they are not visible.*
